Standard Specification for
Steel Sheet, Metallic-Coated by the Hot-Dip Process for Corrugated Steel Pipe

This standard is issued under the fixed designation A 929/A 929M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers steel sheet used in the manufacture of corrugated steel pipe for storm sewers, culverts, drains, and similar uses. The sheet is metallic coated by the hot-dip process. Material for this use is furnished in coils, flat in cut lengths, and corrugated in cut lengths. Many metallic coated materials are covered in this material specification. Users must determine which product best serves their needs. Five different metallic coatings are included:

1.1.1 Zinc-coated (galvanized),
1.1.2 Zinc-5% aluminum-Mischmetal (Zn-5Al-MM) alloy coated,
1.1.3 55% aluminum-zinc (55Al-Zn) alloy coated,
1.1.4 Aluminum-coated Type 2 (aluminized Type 2), and
1.1.5 Aluminum-coated Type 1 (aluminized Type 1).

1.2 Zinc-coated sheet is available in two coating weights [masses]. Other metallic coatings are available in one coating weight [mass] only.

1.3 The values stated in either inch-pound units or SI units are to be regarded separately as the standard. Within the text, the SI units are shown in brackets. The values stated in each system are not equivalents; therefore, each system must be used independently of the other. Combining values from the two systems may result in nonconformance with the specification.

2.1 ASTM Standards:
A 924/A 924M Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process
B 750 Specification for GALFAN (Zinc-5% Aluminum-Mischmetal) Alloy in Ingot Form for Hot-Dip Coatings
E 29 Practice for Using Significant Digits in Test Data to Determine Conformance with Specifications

A 902 Terminology Relating to Metallic Coated Steel Products
A 924/A 924M Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process
B 750 Specification for GALFAN (Zinc-5% Aluminum-Mischmetal) Alloy in Ingot Form for Hot-Dip Coatings
E 29 Practice for Using Significant Digits in Test Data to Determine Conformance with Specifications

3. Terminology

3.1 Definitions: For definitions of terms used in this specification, refer to Terminology A 902. The following definitions are as stated in that terminology:

3.1.1 fabricator, n—as related to corrugated metal pipe, (1) the organization that produces the finished pipe; or (2) for structural plate pipe, the organization that processes flat sheets and other items necessary for the field assembly of finished products.

3.1.2 manufacturer, n—as related to corrugated metal pipe, the organization that produces the metal sheet from which pipe is made.

3.1.3 purchaser, n—as related to corrugated metal pipe, the person or agency that purchases the finished pipe.

3.1.4 Discussion—With regard to this specification for sheet for corrugated steel pipe, the fabricator may also be considered as the purchaser of the sheet, where that term is used in this specification. Such interpretation would not restrict the purchaser of the finished pipe from enforcing any provisions of this specification.

3.2 Definitions of Terms Specific to This Standard:
3.2.1 minimized coating structure, n—a coating characterized by a finer metallurgical coating structure obtained by a treatment designed to restrict the formation of the normal coarse grain structure formed during solidification of the Zn-5Al-MM coating.

3.2.2 regular coating structure, n—the normal coating structure resulting from unrestricted grain growth during normal solidification of the Zn-5Al-MM coating.

3.3 Abbreviations:
3.3.1 Al T2—aluminum-coated Type 2
3.3.2 Al T1—aluminum-coated Type 1
3.3.3 55Al-Zn—55% aluminum-zinc alloy
4. Classification

4.1 The Zn-5Al-MM coating is available in two coating classes, as follows:
   4.1.1 Class A—Minimized coating structure, and
   4.1.2 Class B—Regular coating structure.

5. Ordering Information

5.1 All sheet, both flat and formed, covered by this specification shall be ordered only to the specified thicknesses in the table on coated steel sheet thickness requirements.

5.2 All material furnished to this specification shall be chemically treated unless otherwise specified in the purchase order.

5.3 Orders for material to this specification shall include the following information, as necessary, to describe the desired product adequately:
   5.3.1 Name of material (steel sheet for corrugated pipe):
   5.3.2 ASTM designation and year of issue, as A 929— for inch-pound units, or A 929M— for SI units;
   5.3.3 Type of metallic coating (zinc, zinc-5 % aluminum-Mischmetal alloy, 55 % aluminum-zinc alloy, aluminum-coated Type 2, or aluminum-coated Type 1) (Note 1);
   5.3.3.1 For zinc-coated sheet, the coating weight [mass] (see Table 3). If the coating weight [mass] is not stated, sheet having 2.00 oz/ft² [610 g/m²] nominal coating shall be furnished;
   5.3.3.2 For Zn-5Al-MM coating the class (coating structure) (see 4.1).
   5.3.4 Quantity and Dimensions;
       5.3.4.1 Cut Lengths— Show the number of sheets; thickness; width, either flat or overall corrugated; length; pitch; and depth of corrugations, if corrugated;
       5.3.4.2 Coiled Sheet— Show the total weight [mass]; thickness; width; coil requirements (maximum outside diameter, acceptable inside diameter, and maximum weight [mass] of individual coils).
   5.4 Certification, if required (see 12.1); and
   5.5 Special requirements.

Note 1—Abbreviations may be used to describe the coating type (see 3.3).

Note 2—A typical ordering description (inch-pound units) is as follows: sheet steel for corrugated pipe in accordance with ASTM A 929—, zinc coated, 5000 sheets, 0.064 by 25½ by 60 in. with 2½ by ½ in. corrugations, certified.

Note 3—A typical ordering description [SI units] is as follows: sheet steel for corrugated pipe in accordance with ASTM A 929M—, aluminum coated, Type 2, 45 000 kg, 2.77 by 700 mm by coil, 1500 mm max outside diameter, 600 mm, inside diameter, 7000 kg max, certified.

TABLE 2 Mechanical Requirements (Properties of Flat Sheet Prior to Fabrication)*

<table>
<thead>
<tr>
<th>Property</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tensile strength, min. (ksi)</td>
<td>33.0 [230]</td>
</tr>
<tr>
<td>Yield strength, min. (ksi)</td>
<td>45.0 [310]</td>
</tr>
<tr>
<td>Elongation in 2 in. (50 mm), %</td>
<td>20</td>
</tr>
</tbody>
</table>

* To determine conformance with this specification, round each value for tensile strength and yield strength to the nearest 0.1 ksi [1 MPa] and each value for elongation to the nearest 1 %, both in accordance with the rounding method of Practice E 29.

** Yield point and tensile strength are based on the thickness of the base metal.

If tests are made after coating, determine the base metal thickness after stripping the coating from the ends of the specimen contacting the grips of the tension testing machine prior to tensile testing.

The elongation requirement does not apply to material tested after corrugating.

6. Chemical Composition

6.1 Base Metal Analysis—The base metal cast or product analyses shall conform to the chemical requirements of Table 1.

6.2 Coating Bath Composition:
   6.2.1 Zinc Coating—The coating bath metal shall contain not less than 99 % zinc.
   6.2.2 Zinc-5 % Aluminum-Mischmetal Alloy Coating—The coating bath metal composition shall be 52 to 58 % aluminum, 2.0 % silicon maximum, and balance zinc.
   6.2.3 55 % Aluminum-Zinc Alloy Coating—The coating bath metal composition shall be 52 to 58 % aluminum, 2.0 % silicon maximum, and balance zinc.
   6.2.4 Aluminum Coating Type 2—The coating bath metal composition shall be as follows (all percentages are maximum): Iron, 3.0 %; silicon, 0.35 %; magnesium, 0.50 %; other, each, 0.05 %; other, total, 0.20 %; balance, aluminum.
   6.2.5 Aluminum Coating Type 1—The coating bath metal composition shall be 5 to 11 % silicon, the balance aluminum.

7. Mechanical Properties

7.1 The metallic-coated sheet shall conform to the mechanical requirements listed in Table 2.

7.2 Two tension tests shall be made on random samples of finished material from each cast or heat. One test is sufficient when the finished material from said cast or heat is less than 50 tons [45 Mg]. One tension test shall be made from both the thickest and thinnest material rolled, regardless of the weight represented, when material rolled from one cast or heat differs 0.050 in. [1.25 mm] or more in thickness. The samples shall be prepared and tested in accordance with the method specified in Specification A 924 [A 924M].

8. Coating Requirements Coating Requirements

8.1 The metallic coating weight [mass] shall conform to the requirements listed in Table 3 for the type of metallic coating specified.

8.2 Adhesion of the coating shall be such that no peeling or flaking occurs while the coated sheet is being corrugated and formed into pipe.

9. Dimensions and Tolerances

9.1 Thickness—Sheet thickness shall conform to the dimensions prescribed in Table 4. The thickness of the sheet includes both the base steel and the coating.
The thickness of corrugated sheet shall be increased by 0.003 in. [0.076 mm] to account for the greater coating thickness as compared to the 2 oz/ft² [610 g/m²] zinc coating thickness.

Flattening measures are performed by the fabricator when adequate flattening measures are performed.

### NOTES

9.2 Length—Permissible variations in the length of cut-length sheets, both flat and corrugated, shall be in accordance with Specification A 924 [A 924M].

9.3 Flat Sheet—Permissible variations in the width and camber of flat materials shall be in accordance with Specification A 924 [A 924M]. The flatness tolerances are given in Table 5.

9.4 Corrugated Sheet:

9.4.1 Corrugations—Corrugations shall form smooth continuous curves and tangents. The dimensions of the corrugations shall be in accordance with Table 6.

9.4.2 Covering Width and Lip Dimension—The covering width of corrugated sheet shall be in accordance with Table 7. The covering width is the distance between the crests of the extreme corrugations. The lip dimension of corrugated sheet shall be in accordance with Table 8 and is measured along the radial curvature from the crest of the corrugation to the edge of the sheet. There is no established tolerance for overall width since the covering width and lip dimensions are the governing factors for the formed product.

10. Testing

10.1 The manufacturer shall make such tests and measurements as deemed necessary to ensure that the coated sheet produced complies with this specification.

10.2 The purchaser may make tests and measurements, as determined to be necessary, to confirm conformance with this specification.

10.3 Chemical Analyses of Steel—Cast analysis (by the manufacturer) and product analysis (by the purchaser) shall be in accordance with Specification A 924 [A 924M].

10.4 Mechanical Testing—Mechanical property tests shall be conducted on the sheet prior to corrugating or other fabrication, when possible, and shall be in accordance with Specification A 924 [A 924M]. If the tests are made after...
corrugating, the specimens shall be taken on the tangents of corrugations and used for the determination of tensile and yield strengths only.

10.5 Coating Weight [Mass]:
10.5.1 Sampling for coating weight [mass] determinations shall be in accordance with Specification A 924 [A 924M]. The coating thickness may be determined by the procedures described in Specification A 924 [A 924M], but the weigh-strip-weigh procedures described in 10.5.2 shall apply in case of dispute.

10.5.2 Test for coating weight [mass] using the following procedures:
10.5.2.1 Zinc Coatings—Test Method A 90 [A 90M].
10.5.2.2 Zn-5Al-MM Coatings—Test Method A 90 [A 90M].
10.5.2.3 55Al-Zn Coatings—Test Method A 90 [A 90M] using the dilute hydrochloric acid method.
10.5.2.4 Aluminum Coatings—Test Method A 428 [A 428M].

11. Rejection and Rehearing
11.1 Material tested by the purchaser and found not conforming to this specification may be rejected, subject to the rejection and rehearing provisions of Specification A 924 [A 924M].

12. Certification
12.1 A manufacturer’s certification shall be furnished to the purchaser when specified in the purchase order or contract. The certification shall be in accordance with the provisions of Specification A 924 [A 924M] and shall include reference to this product specification designation and the coating type.

12.2 The test results, including chemical composition, mechanical properties, coating type, and coating weight [mass] for each heat and coating lot, shall be maintained by the manufacturer for seven years without regard to whether a certification was furnished. The test results shall be made available to the fabricator and purchaser upon request.

13. Product Marking
13.1 Each 2 to 5 ft [0.5 to 1.5 m] of sheet in coils or cut lengths shall be identified by showing the following:
13.1.1 Name of manufacturer,
13.1.2 Brand name,
13.1.3 Specified thickness,
13.1.4 Coating type (Zn, Zn-5Al-MM, 55Al-Zn, Al T2, or Al T1), including class for Zn-5Al-MM sheet,
13.1.5 Specified coating weight [mass],
13.1.6 Identification symbols relating to a specific heat number and coating lot number, and
13.1.7 ASTM designation number.
13.2 The brand shall be removed, obliterated, or the sheet rebranded “nonspecification” on each 2 to 5 ft [0.5 to 1.5 m] of sheet in a coating lot or heat for which control tests, as prescribed herein, show nonconformance to this specification.

14. Keywords
14.1 coatings—aluminum; coatings—metallic; coatings—zinc; coatings—zinc-5 % aluminum-Mischmetal; coatings—55 % aluminum-zinc alloy; corrugated steel pipe; pipe—corrugated steel; steel sheet—aluminum coated; steel sheet—hot-dip coated; steel sheet—metallic coated; steel sheet—zinc coated; steel sheet—zinc-5 % aluminum-Mischmetal alloy coated; steel sheet—55 % aluminum-zinc alloy coated
